

PWG Quarterly Feb 2007 Projector & Display Management BOF Status

Rick Landau Dell, CTO Office 2007/02/19 v0.1

Projector & Display Management BOF

- Call for participation at PWG quarterly meeting a year ago
- Began in earnest July 2006
 - Critical mass of interested vendors
 - Projector vendors and OEMs
 - Management software developers
- Weekly concalls
 - Tricky to schedule: Austin, Dallas, Seattle, Singapore, Taiwan, Tokyo
- Email exchange, FTP site for docs
- We want to be Pinocchioed into a real working group
 - Regularly harangue the participants to join PWG

Goals

- Develop a data model for the management data of video projectors and video displays
- Management = Is it healthy? Capabilities? Is it on? Turn it off.
 Current settings? Adjust for usage model.
 - NOT deliver data
- Projectors = Installed projectors from small conference room to theater
 - NOT low-end, personal, carry-around
- Displays = Large, (semi-)permanently mounted displays, digital signage, wall, kiosk, up to jumbotron
 - NOT desktop

Gradual Approach

- Agreed on targets, requirements for management
- Develop architectural model
 - Started with Printer MIB model
- Define common use cases
 - Inventory, manage power and consumables
 - Save and restore settings for usage profiles
- Divide and conquer
 - Everyone takes some use cases, some groups, some data items

Working Method

- Define abstract data model
 - Using abstract language template in XML
- Generate usable SNMP MIB first
- Provide consistent naming, datatypes, semantics for other access points: embedded web server, serial, CIM MOF

Participation

- Active companies
 - Canon (& PWG): Lee Farrell
 - Coretronics (Optoma): Vincent Chen
 - Dell: Rick Landau, Nick D'Alessio, Vincent Ng
 - Delta Electronics: Jason Tsai, Josephine Lee
 - Epson: Hiroshi Midorikawa, Hiroyuki Hashimoto
 - NEC: Koichi Ara
 - SpinozaTechnology: Randy Massengale, Devin Fujimoto
 - Symon Communications: Raymond Rogers
- Still recruiting
 - Others have expressed interest but have not committed a person
 - Limited participation is both a blessing and a curse

Current State

- Agreed requirements and targets
- Set of use cases, 1-3 paragraphs each
- Rough architectural model, long slide set
 - Define subunits, groups of properties, properties within groups
- Template for defining groups, tables, properties
 - Interview sheet: choose datatype, ranges if necessary, enumerations; is it mutable, writable, have a default value, etc.
 - XML format so we can use it to generate at least part of MIB & MOF
 - XSLT translation to MIB fragments just starting, works well so far
- Several groups defined, working on several others
- Detailed definitions of "aspect ratio" values in use in the industry

Groups Currently in Draft

- Audio
- Display capabilities
- Display settings
- Interlocks
- Light source
- Optics
- Power states
- Signal source
- Thermal

Groups Remaining to be Drafted

- Alerts
- Console
- Interfaces
- Interpreters and codecs
- Localization
- System controller
- Transport capabilites
- Transport settings

Documents

- FTP area on ftp.pwg.org/pub/pwg/BOFs/pdm
- Charter, member list, requirements, use cases
- Data model, group and property definitions
- Aspect ratio definitions
- Power state definitions
- Schedule for more groups

Roadmap

- Milestone: Draft abstract data model Feb-March 2007
 - Expect first drafts or better of all groups by end Q1 (unchanged)
- SNMP MIB produced mainly by translation
 - One-shot translation impractical: technically possible, but fixed cost too high
 - Translation will produce several fragments that have to be hand edited into MIB framework
 - Separate groups, TCs; edit into hand-crafted MIB container
 - Add ancillary helper properties (e.g., row update for FRU replacement)

Let's Look at Source Documents

- Structure of FTP area
 - Subdirs: Charter, Requirements, Members, Minutes, Model, Objects
 - (Yes, mistakenly used capitals)
- Requirements, use cases, model slides
- Property definition template
- Schedule of drafts of property groups
- Examples of group properties
- Early alpha attempt at translation to MIB fragments

Questions?
