The Printer Working Group (PWG) Standard for The Internet Printing Protocol (IPP): Job Extensions

Abstract: This IPP specification extends the Job semantics of the IPP Model and Semantics [rfc2911] object model. 11 12 This specification defines some new Operation attributes for use in Job Creation and Document Creation operations. The Printer copies these Operation attributes to the corresponding Job Description attributes, which the clients may 13 query. The Document Creation Operation attributes describe the Document Content and permit the Printer to reject 14 requests that it cannot process correctly. Some corresponding "xxx-default" and "xxx-supported" Printer attributes 15 16 are defined. This specification defines some Job Template attributes that apply to a multi-document Job as a whole 17 lobs. This 18 specification also defines some additional values for the "job-state-reasons" Job Description attribute. Each of the

attributes defined in this specification are independent of each other and are OPTIONAL for a Printer to support.

Title: The Printer Working Group Standard for the Internet Printing Protocol (IPP): Job and Document Operation extensions

69 About the IEEE-ISTO 70

71 The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible operational forum 72 and support services. The IEEE-ISTO provides a forum not only to develop standards, but also to facilitate activities that support the implementation and acceptance of standards in the marketplace. The organization is affiliated with 73

74 the IEEE (http://www.ieee.org/) and the IEEE Standards Association (http://standards.ieee.org/). 75

76 For additional information regarding the IEEE-ISTO and its industry programs visit http://www.ieee-isto.org. 77

79 About the IEEE-ISTO PWG

The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization 80 (ISTO) with member organizations including printer manufacturers, print server developers, operating system 81 providers, network operating systems providers, network connectivity vendors, and print management application 82 developers. The group is chartered to make printers and the applications and operating systems supporting them 83 84 work together better. All references to the PWG in this document implicitly mean "The Printer Working Group, a Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of their work as open 85 86 standards that define print related protocols, interfaces, procedures and conventions. Printer manufacturers and 87 vendors of printer related software will benefit from the interoperability provided by voluntary conformance to these 88 standards.

89 In general, a PWG standard is a specification that is stable, well understood, and is technically competent, has 90 multiple, independent and interoperable implementations with substantial operational experience, and enjoys 91 significant public support.

92 For additional information regarding the Printer Working Group visit: http://www.pwg.org

intent is to propose this

Object extension [ippdoc]. Deleted: Scope

Introduction and Summary 1 242

243	This IPP specification is an assortment of attributes and values that extend the Job semantics of the IPP Model and	Deleted: extends
244	Semantics [rfc2911], This specification defines some new Operation attributes for use in Job Creation and	Deleted: object model
245	Document Creation operations. The Printer copies these Operation attributes to the corresponding Job Description	
246	attributes, which the clients may query. The Document Creation Operation attributes describe the Document Content	
247	and permit the Printer to reject requests that it cannot process correctly. Some corresponding "xxx-default" and "xxx-	
248	supported" Printer attributes are defined. This specification defines some Job Template attributes that apply to a	
249	multi-document Job as a whole; their names start with "job-" to indicate their job-wide scope. This specification	
250	defines the "output-device" Job Template attribute that can apply to Documents and to Sheets as well as Jobs_This	
251	specification also defines some additional values for the "job-state-reasons" Job Description attribute. Each of the	
252	attributes defined in this specification are independent of each other and are OPTIONAL for a Printer to support.	
253	This specification is an IPP extension referenced by the PWG Semantic Model [pwg-sm]. The purpose for these	Deleted: The intent is to propose the
254	extensions is so that the print industry can have a common semantic specification for use in IPP, the PWG Semantic	Deleted: a
255 256	Model [pwg-sm], the PWG Print Service Interface (PSI) project [pwg-psi], the PWG IPP Fax (IPPFAX) project [ippfax], and the Free Standards Group Job Ticket API [fsg-it].	Deleted: and which will be

1.1 Attributes Summary 257

Table 1 summarizes the Operation attributes defined in this specification for use with Job Creation operations. The 258 259 Printer copies these Operation attributes to corresponding Job Description attributes defined in this specification.

260

Table 1 - Summary of Job Creation Operation attributes

Operation attribute	Printer	Description	
	support		
			1
ipp-attribute-fidelity (boolean)	MUST	Allows the client to <u>control</u> whether or not the Printer MUST	1 1
		support all Job Template attributes supplied in Job Creation	
		operation, else the Printer MUST reject the job. Defined in	1 1
		[rfc2911] section 3.2.1.2 and 15.	
job-mandatory-attributes (1setOf	MAY	Allows the client to list the Job Template attributes that the	11
type2 keyword)		Printer MUST support when supplied in the Job Creation	
		operation else the Printer MUST reject the job.	111
-	T		1

261

262 Table 2 summarizes the Operation attributes defined in this specification for use with Job Creation operations and 263 Send-Document and Send-URI operations. These Operation attributes allow the client to supply descriptions of the 264 Document Content to the Printer about individual Document Contents at request time. When supplied in a Job 265 Creation request, these Operation attributes provide defaults for the Document or Documents of the Job, When supplied in a Document Creation operation, they describe the Document explicitly. This specification does not define 266 267 corresponding Document Description attributes, since this specification does not include or depend on a Document 268 object¹.

¹ For Document Description attributes that correspond to the Operation attributes defined for Document Creation operations, see the Document object defined in [ippdoc].

273 274

275

276 277

278

Table 3 summarizes the Job Template attributes defined in this specification for use with Job Creation operations.

The Job Template attributes that have a "job-" prefix are defined to apply to the Job as a whole, independent of the

value of the "multiple-document-handling" Job Template attribute ([rfc2911] section 4.2.4), whose 'separate-

documents-collated-copies' and 'separate-documents-uncollated-copies' values cause the Printer to produce

- separate Output Documents. The "output-device" Job Template attribute is not restricted to be job-wide and can
- 8). When supplied in a Document Creation operation, the "output-device" Job Template attribute describes the
- Document explicitly. This specification does not define corresponding Document Description attributes, since
- specification does not include or depend on a Document object

279 280 281

Table 3 - Summary of Job Template Attributes

Job Template attribute	Printer	Description
	support	
job-copies (integer(1:MAX))	MAY	The number of copies of the entire Job.
job-cover-back (collection)	MAY	The cover for the back of the entire Job.
job-cover-front (collection)	MAY	The cover for the front of the entire Job.
job-finishings (1setOf type2 enum)	MAY	The finishing for the entire Job.
job-finishings-col (1setOf collection)	MAY	The finishing characteristics for the entire Job.
output-device (name(127))	MAY	Allows the client to indicate a preference for output devices,
		for a Printer that supports one or more output device (see fan-
		out in [rfc2911] section 2.1).

282 2 Terminology

283 This section defines terminology used throughout this document.

Copyright © 2003 IEEE-ISTO. All rights reserved.

Page 9 of 46

Deleted: se

² For Document Description attributes that correspond to the Operation attributes defined for Document Creation operations, see the Document object defined in [ippdoc].

2.1 Conformance Terminology 284

Capitalized terms, such as MUST, MUST NOT, REQUIRED, SHOULD, SHOULD NOT, MAY, and OPTIONAL, have 285 286 special meaning relating to conformance as defined in RFC 2119 [rfc2119].

2.2 Other Terminology 287

This document uses the same terminology as [rfc2911], such as "client", "Printer", "attribute", "attribute value", 288 "keyword", "Job Template attribute", "Operation attribute", "operation", "request", "response", and "support" 289 (see [rfc2911] section 12.2.3) with the same meaning. In addition, the following terms are defined for use in this 290 291 document:

- 292 Document Creation operation - operations that accept Document Content. Specifically: Print-Job, Print-URI, Send-293 Document and Send-URI. Note: Print-Job and Print-URI are both Job Creation and Document Creation 294 operations.
- 295 Finished Document - the result that the Printer produces on Sheets after the operations of printing, folding, cutting, 296 finishing, etc. are completed.
- Job Attribute an Operation attribute or a Job Template attribute that applies to the Job (object) as a whole. For 297 298 example, "job-name" is an Operation attribute and "job-priority" is a Job Template attribute.
- 299 Job Creation operation - operations that create Job objects, specifically: Print-Job, Print-URI, and Create-Job as defined in [rfc2911]. 300
- 301 **Operation attribute** - an attribute supplied by a client in the Operation Attribute group of a request in order to affect 302 the behavior of the operation or an attribute returned by the Printer in the Operation Attributes group in an operation 303 response in order to report the results of the operation. For some Operation attributes, the Printer copies the values 304 supplied by the client to corresponding Job Description attributes.
- Page The term "Page" used throughout this document is a synonym for PDL page. 305
- PDL Page. A "PDL Page" is a page according to the definition of pages in the language used to express the 306
- 307 document data. Note: If the PDL contains multiple original source pages that have been placed on a single page by
- 308 the client application, then the PDL page count is one. On the other hand, if the client requests that multiple PDL
- 309 Pages are placed on a single side of media, by supplying "number-up" with a value greater than 1, then the PDL 310
- page count will be more than one. [rfc2911] uses the term "print stream page" for PDL Page.
- 311 Sheet. - A Sheet is the unit of media that a printer puts marks on. It is the most basic unit of output from a printer. A 312 printer may mark on one side or on both sides of a sheet.

Operation Attributes for Job Creation and Document Creation operations 3 313

314 This section defines Operation attributes for use in Job Creation operations and/or Document Creation operations and as such describe characteristics of the Job and Document, rather than instructions to the Printer. For some of 315 316 these Operation attributes there are corresponding "xxx-default" and "xxx-supported" Printer Description attributes 317 (see section 7).

³ [rfc2911] uses the terms "Printer object" and "Printer" interchangeably to mean the same thing. For simplicity, this document uses the term "Printer" exclusively, except for definitions copied directly from [rfc2911]. Nonetheless, the intent is as in [rfc2911]: a Printer is an object that MAY be hosted in the device or in a server.

Deleted: ¶

Deleted: Page - a synonym for the term "print-stream page" as defined in [rfc2911] section 12.2.4. A Page is a page according to the definition of a page in the language used to express the document data (PDL). Usually a Page contains a single page as intended by the author of the source document. However, if the application that generates the PDL places multiple author pages on a single Page, they are still considered a single Page as far as the Printer and this specification is concerned. Sheet - the unit of media that a printer puts marks on. A Sheet is the most basic unit of output from a Printer. A printer may mark on one side or on both sides of a Sheet.¶

,Table 5 lists the Operation attributes that clients supply in Job and Document Creation operations and whether the 322 Printer copies (indicated by ">") the supplied value to the corresponding Job Description⁶ attribute. The following 323 statements apply to all Operation attributes for Job and Document Creation operations and are not repeated in each 324 325 Operation attribute Description:

If the Printer doesn't support the "xxx" Operation attribute, the Printer MUST ignore the "xxx" attribute (as 326 with any OPTIONAL Operation attribute) and return the "xxx" attribute with the supplied value as 327 unsupported in the Unsupported Attributes group as specified in [rfc2911] section 3.1.7. 328

If the Printer supports the "xxx" Operation attribute, the Printer MUST also: 329

> 1. support the corresponding "xxx-default" and "xxx-supported" Printer Description attributes as well, if defined (see Table 4 and section 7). If the Printer supports either of the "xxx-default" or "xxx-

⁶ The operations defined for Document Creation operations do not have corresponding Document Description attributes defined in this specification, since this specification does not assume that there is a Document object. See [ippdoc] for the corresponding Document Description attributes.

supported" Printer Description attributes, then the Printer MUST also support the corresponding Operation attribute.

validate the values supplied by the client in the "xxx" Operation attribute against the values indicated 2. in the Printer's corresponding "xxx-supported" Printer Description attribute (see section 7). If the values do not validate, the Printer MUST perform one of the actions indicated for that Operation attribute, unless explicitly specified otherwise in the Description, such as (1) reject the request, (2) accept the request and either (a) hold the job for operator intervention or (b) print the Job ignoring the attribute. In all of these cases, the Printer MUST return the Operation attribute with the unsupported value in the Unsupported Attributes group in the response (see [rfc2911] section 3.1.7).

Creation operations Conformance

Attribute Syntax

343

344 **3.1 Operation attributes for Job Creation operations only**

This section defines additional operation attributes that the client MAY supply in Job Creation operations (Print-Job, Print-URI, and Create-Job) and Validate-Job, but not in Send-Document or Send-URI operations.

347 3.1.1 ipp-attribute-fidelity (boolean) ([rfc2911] section 3.2.1 and 15)

This REQUIRED Operation attribute specifies the policy for the Printer to use (see [rfc2911] §3.2.1.1) when the client supplies unsupported Job Template attributes⁷ or values in a Job Creation operation. The value 'true' indicates that total fidelity to client-supplied Job Template attributes and values is required for this Job Creation operation. If the client supplies the value 'false' or omits the attribute, then the Printer MUST accept the Job Creation operation.

352 The Printer MUST copy this attribute to the corresponding (new) Job Description attribute (see section 5.1.2).

353 **3.1.1.1** Why there are no "ipp-attribute-fidelity-default" and "ipp-attribute-fidelity-supported" attributes

Because [rfc2911] defines the default value to be 'false' there is no point to define an "ipp-attribute-fidelity-default"
 Printer Description attribute. Because [rfc2911] REQUIRES a Printer to support the "ipp-attribute-fidelity" Operation attribute there is no need for an "ipp-attribute-fidelity-supported" Printer Description attribute.

357 3.1.2 job-mandatory-attributes (1setOf type2 keyword)

This OPTIONAL Operation attribute permits the client to identify which Job Template attributes the Printer MUST support in this Job Creation request in order to accept the Job. The Printer MUST reject this Job Creation operation if the client supplies an unsupported Job Template attribute or value in the request that is also identified in this list.

⁷ The value of the "ipp-attribute-fidelity" Operation attribute has no effect on other Operation attributes supplied by the client, only on Job Template attributes supplied by the client.

Deleted: 6 Deleted: 02

- 361 The client MAY supply the "job-mandatory-attributes" Operation attribute in a Job Creation operation or Validate-Job 362 operation and MUST NOT supply this attribute in any other operation. If the Printer supports the "job-mandatoryattributes" Operation attribute, the Printer MUST support this attribute in all Job Creation operations that it supports 363 364 and in the Validate-Job operation.
- 365 If the client supplies the "job-mandatory-attributes" Operation attribute and the 'job-mandatory-attribute-fidelity" Operation attribute with the 'true' value, the Printer MUST ignore the "job-mandatory-attributes", since the client is requesting 366 367 that all of the supplied Job Template attributes in the Job Creation request MUST be supported in order for the 368 Printer to accept the Job.
- 369 The Printer MUST copy this attribute to the corresponding "job-mandatory-attributes" Job Description attribute (see 370 section 5.1.3) for auditing and trouble-shooting purposes⁸.
- The values of the "job-mandatory-attributes" attribute are the keyword attribute names that identify Job Template 371 attributes; for example, 'job-hold-until', 'job-finishings' (see section 4.1.3.3), 'copies' and 'media'. In order to identify a 372 373 member attribute of a collection attribute, the keyword names of both the collection attribute and the member 374 attribute are given separated by a period (.) character. For example, to make the "media" attribute of the "cover-375
- front" collection attribute mandatory, supply the keyword value: 'cover-front.media'.

376 The Printer MUST accept any keyword values for the "job-mandatory-attributes" attribute itself whether or not the corresponding Job Template attributes are supported by the Printer and MUST NOT return any unsupported 377 378 keywords in the Unsupported Attributes Group in the response. If the client supplies this "job-mandatory-attributes" Operation attribute in a Job Creation operation with values that represent Job Template attributes that the Printer 379 380 doesn't support, the Printer MUST otherwise accept the attribute anyway. The Printer MUST reject this Job Creation 381 only if the client actually supplies any of the identified Job Template attributes that the Printer doesn't support. Because the Printer doesn't reject when the "job-mandatory-attributes" Operation attribute has unsupported attribute 382 keyword names, the client MAY supply all of the attribute keyword names that the client supports without having to 383 384 tailor the list to the particular Printer to which the client is submitting the Job Creation operation, thereby simplifying 385 client use of this attribute.

Note: The "job-mandatory-attributes" has nothing to do with whether the Printer overrides the PDL with the identified 386 Job Template attributes (see [rfc2911] sections 4.4.28 and 15). 387

388 3.1.2.1 Why there are no "job-mandatory-attributes-default" and "job-mandatory-attributes-supported" **Printer Description attributes** 389

By definition, omission of the "job-mandatory-attributes" Operation attribute (and the "ipp-attribute-fidelity" Operation 390 391 attribute with a 'false' value or omitted) means that the client is requesting that none of the supplied Job Template 392 attributes need to be supported in order to accept the Job, i.e., the Printer MUST NOT reject the job because of any 393 unsupported Job Template attributes. So the default is an empty list, so there is no point to have a "job-mandatoryattributes-default" Printer attribute. 394

395 By definition, the client can supply any Job Template attribute in the value list of the "job-mandatory-attributes" 396 Operation attribute, whether or not the Printer actually supports that Job Template attribute. Therefore, it is not 397 possible to have a "job-mandatory-attributes-supported" list, since all possible keywords would have to be expressed.

- 398 Note: the client MAY query the Printer's "job-creation-attributes-supported" (see [ippsave] section 7.1) and
- 399 "document-creation-attributes-supported" (see [ippdoc] section 10.1) to see which Job Template and Document 400 Template attributes the Printer actually supports.

Copyright © 2003 IEEE-ISTO. All rights reserved.

Deleted: the PDL

⁸ The Printer uses the "job-mandatory-attributes" Job Description attribute for validating subsequent Document Template attributes supplied in Send-Document and Send-URI operations for this job when also supporting [ippdoc], where the client can supply Document Template attributes.

401

_ - - Deleted: 6/02

3.2 Operation attributes for both Job and Document Creation operations

402 This section defines the semantics for the Operation attributes that a client MAY supply in a Job Creation operation

403 (Print-Job, Print-URI, Create-Job) or a Document Creation operation (Print-Job, Print-URI, Send-Document and
 404 Send-URI). Note: Print-Job and Print-URI are both Job Creation and Document Creation operations.

send-ord). Note: I fine out and I fine out are bounded cleaner and becament cleaner operations.

405 3.2.1 compression (type2 keyword)

This REQUIRED Operation attribute identifies the compression used for the Documents in this Job and is defined i
 [rfc2911] section. It is included in this specification, because this specification defines the corresponding
 "compressions-supplied" Job Description attribute (see section 5.2.1.

409 3.2.2 document-charset (charset)

This OPTIONAL Operation attribute identifies the charset of the Document Content. This Operation attribute is intended to be supported by Printers that support a document-format in which the charset may be ambiguous in the Document content, such as 'application/vnd.hp-PCL', where the charset escape sequence MAY be omitted from the data.

414 If a client supplies the "document-charset" Operation attribute in a Document Creation operation with a value that the 415 Printer doesn't support, the Printer MUST reject the job and return the status code: 'client-error-charset-not-

- supported' (see [rfc2911] section 3.1.4.14), since the interpretation of the content will be mis-understood by the
 Printer
- The standard values for these attributes are Internet Media types (sometimes called MIME types). For further details see the description of the 'mimeMediaType' attribute syntax in [rfc2911] section 4.1.9.

The Printer MUST support this attribute if it supports a document format for which the Document Content can be 420 ambiguous with respect to the charset being used to encode the data. For example, the 'application/vnd.hp-PCL' 421 422 MAY omit the charset escape sequence. Although [rfc2854] strongly RECOMMENDS that 'text/html', include a " charset=charset' parameter in the MIME type itself (that is, explicitly in the value of the "document-format" attribute), 423 424 often the charset= parameter is not present in the MIME type and the Printer MUST assume a charset. Thus a Printer that supports the text/html MIME type MUST support the "document-charset" operation attributes. Also many 425 426 text files use the various 8-bit ISO 8859 charsets in which the lower half is US-ASCII and the upper half is various Latin sets (about 8 or 9), Greek, Cyrillic, Hebrew, and Arabic. Shift JIS is another example where the left half is US-427 428 ASCII, but the right half can be one of a number of things. But if the data doesn't contain the charset escape sequences, this attribute can help the Printer know what the charset is in the Document. Such document formats are 429 430 called "charset-ambiguous" document formats. Finally, even though [rfc2046] REQUIRES the "; charset=" MIME 431 type parameter if the file contains other than US-ASCII, in practice, the "; charset=" MIME type parameter is often 432 omitted, thus making 'text/plain' a charset-ambiguous document format. See the discussion in [rfc2911] section 4.1.9 433 and [rfc2046].

The Printer MAY also check the Document content while processing to see that the document data meets the coding requirements for the supplied charset. If the data contains something that is outside the charset encoding, the Printer MUST either (1) hold the job or (2) abort, and SHOULD NOT continue printing square boxes for encoded characters that are outside the charset supplied by the client.

Many other document formats, such as 'application/postscript' and 'application/pdf', are *not* charset-ambiguous, so
 that Printers that support only such formats MAY omit support of the "document-charset" Operation/ Description
 attributes.

441 If the Printer supports the "document-charset" Operation attribute, it MUST also support the corresponding

- 442 "document-charset-default" and "document-charset-supported" Printer Description attributes as well and vice versa
- 443 (see sections 7.1 and 7.2).

Page 15 of 46

Deleted: <#>output-devicerequested (name(127))¶ This OPTIONAL Operation attrib

specifies the name of the target output device for a Printer that fan out to multiple devices (see [rfc2911] section 2.1). This allows the client to control which output device the Printer selects. If this attribute is omitted, the Printer selects whicher output device seems best for the job in an implementation dependent manner. The client can discover which output devices the Printer supports by querying the Printer's "output-device-requested-supported Printer attribute (see section 7.12). ¶ If the Printer supports this Operation attribute, the Printer MUST support it only on Job Creation operations, not subsequent Document Creation operations for this Job. If the Printer supports this Operation attribute, the Printer MUST support the "output-device-assigned" Job Description attribute with the same values (see [rfc2911] section 4.3.13). <#>output-device-default (name(MAX))¶

This OPTIONAL Printer Description attribute specifies the default value for the Job's ["]output-device-assigned" Job Description attribute. A Printer MAY have a dynamic scheduling algorithm to assign jobs to output devices, in which case the "outputdevice-default" Printer attribute is not configured. If the Printer does not have a dynamic scheduling algorithm to assign Jobs to output devices, the Printer copies the value of the "output-device-default" Printer attribute to the Job's "output-device assigned" attribute when the client omits the "output-device-requested" Operation attribute.¶

t

444 3.2.3 document-digital-signature (type2 keyword)

445 This OPTIONAL Operation attribute identifies the technology of digital signature in the Document content.

If a client supplies this "document-digital-signature" Operation attribute in a Document Creation operation with a value that the Printer doesn't support, the Printer MUST perform one of the following actions depending on implementation: (1) reject the request OR (2) accept the request, set the Job's "job-state-reasons" attribute to 'digital-signature-type-not-supported' (see section 6.1), and either (a) put the Job in the 'pending-held' state or (b) process the job ignoring the attribute. See section 3 above for more details.

If the Printer supports this attribute and the value supplied by the client, the Printer MAY verify the signature according to the rule for that signature format and "document-format". If the signature does not verify, then the Printer MUST perform one of the following actions depending on implementation (which MAY depend on the "document-format" and a site-established policy):

- ignore the signature (and MAY indicate on the printed output some how) and MUST set the Job's "job-state-reasons" Job Description attribute with the 'digital-signature-did-not-verify' value (see section 6.1).

- abort the job depending on implementation and/or site configuration and MUST set the Job's "job-state-reasons" Job Description attribute with the 'job-aborted-by-system' and 'digital-signature-did-not-verify' values (see section 6.1).

Different PDLs have different techniques of embedding the signature. If the Printer supports the "document-digital-signature" attribute and the supplied "document-format", the Printer MUST accept the document. However, if the Printer either doesn't support the value of the "document-digital-signature", Operation attribute or doesn't support the technique used by the supplied "document-format" attribute, the Printer MUST either (1) ignore the signature or (2) put the job on hold and wait for human intervention, depending on implementation. If the Printer doesn't support the supplied value, the Printer MUST return the "document-digital-signature" attribute with its value as unsupported in the Unsupported Attributes group as specified in [rfc2911] section 3.1.7.

- 470 The following standard keyword values are defined:
- 471 'dss': Digital Signature Standard (DSS) [dss].
- 472 'none': There is not a digital signature in the Document content. If this attribute is supported, the 'none'
 473 value MUST be implemented but MAY be removed by the administrator.
- 474 'pgp': PGP Message Exchange Formats [rfc1991].
- 475 'smime': Enhanced Security Services for S/MIME [rfc2634].
- 476 'xmldsig' XML Digital Signature [xmldsig].

477 **<u>3.2.4</u>** document-format (mimeMediaType)

478 This REQUIRED Operation attribute (see [rfc2911] section 3.2.1.1) indicates the document format of the supplied

Document Content. If a client supplies the "document-format" Operation attribute with a value that the Printer doesn't
 support, the Printer MUST reject the job and return the status code 'client-error-document-format-not-supported' (see
 [rfc2911] section 3.1.4.11), since the Printer cannot process the data.

482 The standard values for this attribute are Internet Media types (sometimes called MIME types). For some MIME 483 types, such as 'text/plain' [rfc2046], the "; charset=" parameter is defined which specifies the charset of the Document 484 content. The Printer MUST support the charset MIME parameter as well as the "document-charset" Operation

Page 16 of 46

Deleted: '

485 attribute (section 3.2.2) if the Printer supports any text MIME type, such as 'text/plain' or 'text/html'. For further 486 details see the description of the 'mimeMediaType' attribute syntax in [rfc2911] section 4.1.9 and [rfc2046] and the 487 "document-charset" Operation attribute (section 3.2.2).

488 Many printer languages in the Printer MIB do not have a MIME type registered with IANA.^e It is the intent of the PWG 489 to registers all of the Printer MIB v2 XXX Printer Languages as 'application/vnd.PWG-XXX'. If a Printer Language already has a registered MIME Media type or gets a registration in the future, then that MIME Type MUST be used in 490 491 preference to the 'application/vnd.PWG-XXX' MIME Type. For example, PostScript® has the MIME Media type: application/postscript' and PCL has the MIME Media Type: 'application/vnd.HP-PCL, so those MIME Media types 492 493 MUST be used instead of 'application/vnd.PWG-PS' and 'application/vnd.PWG-PCL'. For example, the NEC NPDL printer language from the Printer MIB does not have a MIME type registered with IANA. Therefore, the "document-494 format" = 'application/vnd.PWG-NPDL' MUST be used. 495

496 Note: CIP4 did not agree to register MIME types for other organizations and standards. Instead, CIP4 will just add values to the flat file that aren't MIME types. The values will not start with any of the MIME type roots: application/, 497 498 audio/, image/, message/, model/, multipart/, test/, or video.

499 ACTION ITEM (Tom and Ira): Propose a format for the file.

500 See also the "document-format-version" Operation attribute in section 3.2.6 and the "document-format-details" 501 Operation attribute in section 3.2.5.

3.2.5 document-format-details (1setOf collection) 502

This OPTIONAL Operation attribute supplied in Document Creation operations summarizes the details of the 503 504 Document content, including any files contained in the Document. This Operation attribute is intended to be supported by Printers that support a packaging document format, such as 'application/zip' or 'multipart/related', in 505 order to detail the contents. However, this Operation attribute MAY be used with any document format. See Table 6 506 for a list of the member attributes along with the client and Printer conformance requirements. 507

508 All member attributes, if supplied, MUST have contents. The value MUST NOT be omitted.

509 If a Printer supports a packaging MIME type, such as 'multipart/related' or 'application/zip', the Printer MUST support

this "document-format-details" Operation attribute. If a Printer does not support a packaging MIME type, it MAY omit 510

511 support of the "document-format-details" Operation attribute and Description attribute. The purpose of the 512 "document-format-details" Operation attribute is to describe the details of the document format or formats in the

513 supplied Document, including the packaging format itself, so that the Printer knows what to expect.

514 If a client supplies the "document-format-details" Operation attribute in a Document Creation request with member

attributes and/or values that the Printer doesn't support, the Printer MUST perform one of the following actions 515 516

depending on implementation: (1) reject the request OR (2) accept the request and either (a) put the Job in the 'pending-held' state or (b) process the job ignoring the attribute. See section 3 above for more details. However, if 517

518 the "document-charset" or the "document-format" member attributes are the ones in guestion, the Printer MUST

reject the request, same as for the "document-charset" and "document-format" Operation attributes (see sections 519

520 3.2.2 and 3.2.4) and return the 'client-error-charset-not-supported' (see [rfc2911] section 13.1.4.16) or the 'client-

error-document-format-not-supported' (see [rfc2911] section 13.1.4.11) status-codes, respectively. 521

Page 17 of 46

⁹ Companies are urged to register there Printer languages with IANA using the 'application/vnd.XX-yyy vendor tree. There has also been a long standing PWG proposal to register all of these as 'application/vnd.pwg-yyy.

522 For a packaging format, the "document-format-details" attribute does not provide means to associate each collection

value with particular document in the archive file, so it does not provide a "manifest"¹⁰ of the packaging. One of the

524 packaging collection values MAY describe the packaging format itself, in which case that collection value MUST be 525 the first collection value. The remaining collection values provide the summary of the details of the contained files in

525 the first co 526 any order.

527 There MUST NOT be any duplicate collection values, that is, no collection values with all the same member attribute 528 values; it's a set, not a sequence. So 100 PostScript files with the same details in a .zip file:

529 (1) MAY have one collection value with the "document-format" member attribute = 'application/zip' MIME type 530 value and MAY have additional member attributes that give details about the .zip file itself and

531 (2) MUST have one collection value containing a "document-format" member attribute =

532 'application/postscript' and MAY have additional member attributes that give the details about the PostScript 533 files.

534 If a file in a packaging file is itself a packaging file, the single "document-format-details" (1setOf collection) Operation

- attribute SHOULD contain the flattened distinct collection values for all files at all nested levels. Therefore, the
 "document-format-details" collection attribute is not recursively defined and MUST NOT contain the "document-
- 537 format-details" attribute as a member attribute.

Table 6 - "document-format-details" member Operation attributes

Member Attribute Name	Attribute Syntax	Client supplies	Printer Support	Member Attribute Section	Top Level Attribute Section
document-source-application-name	name(MAX)	MAY	MAY	3.2.5.1	N/A
document-source-application-version	text(127)	MAY	MAY	3.2.5.2	N/A
document-source-os-name	name(40)	MAY	MAY	3.2.5.3	N/A
document-source-os-version	text(40)	MAY	MAY	3.2.5.4	N/A
document-format	mimeMediaType	MUST	MUST	3.2.5.5	3.2.4
document-format-device-id	text(127)	MAY	MAY	3.2.5.6	N/A
document-format-version	text(127)	SHOULD	MUST	3.2.5.7	3.2.6
document-natural-languages	1setOf naturalLanguage	MAY	MAY	3.2.5.8	3.2.9

539

538

540 The client can determine which member attributes of the "document-format-details" are supported by querying the 541 Printer's "document-format-details-supported" (1setOf type2 keyword) Printer Description attribute (see section 7.6).

Set Finder's document-ronnal-details-supported (TSetOT type2 keyword) Printer Description attribute (see Section 7.6).

542 Table 6 shows that three of the member attributes also have comparable top level Operation attributes defined with 543 the same names. See the sections listed in the rightmost column. These three high level attributes have

corresponding "xxx-default" and "xxx-supported" Printer Description attributes. These values are also for use with
 the corresponding three member attributes. The remaining member attributes do not have any corresponding "xxx default" and "xxx-supported" Printer Description attribute.

If a client supplies this "document-format-details" Operation attribute with a member attribute with a value that the
 Printer doesn't support, the Printer MUST perform one of the following actions: (1) reject the request OR (2) accept

Page 18 of 46

¹⁰ If the client wants to achieve a "manifest", that is a complete list of each file in a packaging, then the client needs to extract each file from the package and submit each one in a separate Document Creation operation. Note: the client can re-compress each file before sending, so the compression isn't lost when sending each document separately.

	IPP Job Extensions, 7/28/03 Page 19 of 4	§_↓[I	Deleted: 6/02
549 550	the request and either (a) put the Job in the 'pending-held' state or (b) process the job ignoring the attribute. See section 3 above for more details.		
FF4		•+	Formatted: Bullets and Numbering
551	3.2.5.1 document-source-application-name (name(MAX))		
552 553 554 555	This OPTIONAL member Operation attribute identifies the application that generated the document. The value MUST be all lowercase in order to facilitate matching. The version number MUST NOT be included (see the "document-source-application-version" attribute). Examples: "photoshop", "microsoft word", "unknown".	C	
556	3.2.5.2 document-source-application-version (text(127))	•+1	Formatted: Bullets and Numbering
557 558 559 560	This OPTIONAL member Operation attribute identifies the version number of the application that created the document. The value MUST be all lowercase in order to facilitate matching. The intent of this attribute is for purposes of affecting the interpreting by the Printer for any formats for which the source application version might have different semantics. Examples:	I	
561	"8.1 (4331)" for Winzip®, "5.0.5 10/26/2001" for Acrobat®, "2000 (9.0.4119 sr-1)" for Microsoft® Word		
562 563	If the client omits this member attribute, that matches with any version. Similarly, the Printer's member attribute MAY be omitted or be a zero length string to indicate any.		
564	3.2.5.3 document-source-os-name (name(40))	• + [!	Formatted: Bullets and Numbering
565 566 567 568 569	This OPTIONAL member Operation attribute identifies the name of the operating system on which the document was generated. Valid values are the operating system names defined in the IANA Operating System name registry [os-names] with the version number portion removed (see the "document-source-os-version" attribute). IANA Operating System Names consist of up to 40 <i>uppercase</i> US-ASCII letters, hyphen ("-"), period ("."), and slash ("/") characters. The value MUST be all lowercase in order to facilitate matching.	I	
570	Possible example IANA OS Registry values: 'linux', 'macos', 'sun-os', 'unix', "unknown", 'windows'.		
571	ACTION ITEM: Get Sun to register SOLARIS with IANA.(Tom H)		
572	<u>3.2.5.4</u> document-source-os-version (text(40))	•	Formatted: Bullets and Numbering
573 574 575 576 577	This OPTIONAL member Operation attribute identifies the version of the operating system on which the document was generated. Valid values include the version portion of any of the operating system names defined in the IANA Registry [os-names]. The value MUST be all lowercase in order to facilitate matching. The value MUST NOT include the name portion of the registered OS name (see "document-source-os-name" attribute).		
578 579 580 581 582	Possible example values for the indicated "document-source-os-name" value are: for 'linux': '1.0', '1.2', '2,0', '2.2', '2.4' for 'unix': 'bsd', 'v', 'v.1', 'v.2', 'v.3', 'pc' for 'windows': '95', '98', 'ce', 'nt', 'nt-2', 'nt-3', 'nt-3.5', 'nt-3.51', 'nt-4', 'nt-5' (windows 2000), ACTION ITEM: Get Microsoft to register NT-5.1 (maybe NT-5.2) with IANA. <u>(Ira M)</u>	l	
583		_ ا	
584	3.2.5.5 document-format (mimeMediaType)	•1	Formatted: Bullets and Numbering
585 586 587	This REQUIRED member Operation attribute identifies the document format (see [rfc2911] §3.2.1.1) of the collection value of which it is a member. The client MUST supply and the Printer MUST support this membe attribute in each collection value. The values for this member attribute are Internet Media types (sometimes	r

615 616 617	If the client supplies this "document-format-version" Operation attribute, the client MUST also supply the format" Operation attribute (section 3.2.4), so that the Printer does not need to parse the "document-for string in order to determine the document format and version.			
618 619 620 621 622	If a client supplies this "document-format-version" Operation attribute with a value that the Printer doesn indicated by the Printer's "document-format-version-supported" attribute (see section 7.8), the Printer M one of the following actions, depending on implementation: (1) reject the request OR (2) accept the rec either (a) put the Job in the 'pending-held' state or (b) process the job ignoring the attribute. See section more details.	/UST perform quest and		

The defined values are taken from the Printer MIB [rfc1759] langTC values (after removing the "lang") used in the 623

prtInterpreterLangFamily and the prtInterpreterLangLevel attributes (SNMP calls them "objects") separated by the "/" character. If there is no version, just the langTC prefix without the "/" is used. Note: the Printer MIB 624

625 626 prtInterpreterLangVersion attribute is not used, since no standard values are given in the Printer MIB.

The short first field before the "/" character are unique, so that the version values are self-identifying so that all the versions for all document formats can be combined into a single list for the Printer's "document-format-version-627

628

629 supported" Printer attribute. The first field also tends to be the acronym for the document format and often is also the

Page 20 of 46

Page 21 of 46 ____ Deleted: 6/02

- 630 file name extension registered with IANA. The Printer MIB shows the first field in uppercase for readability.
- However, the Printer MUST perform case-insensitive matching of supplied values with supported values. If the 631
- common acronym includes a "/", such as TIFF/IT, the "/" is changed to "-" so that the first field ends with the first "/." 632
- 633 Example values:
- 'PS/3': For Postscript level 3 [rfc1759]. 634
- 'PCL/5e': For PCL 5e [rfc1759]. 635
- 'PDF/1.4': For PDF version 1.4 [pdf] 636
- 637 'PDF/X-1a:2001': For PDF/X-1a [iso15930]
- 'DCS/2.0' For Document Color Separation (DCS), version 2.0. [dcs2.0] 638
- 'TIFF-IT/FP:1998': TIFF/IT [iso12639] Full Page baseline. 639
- 'TIFF-IT/CT:1998': TIFF/IT [iso12639] Continuous Tone picture data baseline 640
- 'TIFF-IT/FP/P1:1998': TIFF/IT [iso12639] Full Page profile 1 641
- 'TIFF-IT/CT/P1:1998': TIFF/IT [iso12639] Continuous Tone picture data profile 1 642
- 'Automatic': auto sense the format [rfc1759]. Is use in combination with the 'application/octet-stream' (see 643 [rfc2911] section 4.1.9.1) value of the "document-format" attribute (section 3.2.4). 644
- 645

646 3.2.6.1 Why no "document-format-version-default"

647 There is no "document-format-version-default" since to be meaningful, the default would have to depend on the "document-format". Currently, there are no "xxx-default" attributes whose values depend on the value of other 648 attributes. Thus an implementation is free to supply its own defaults that depend on the "document-format". 649

650 3.2.7 document-message (text(MAX))

This OPTIONAL Operation attribute contains a message from the user to the operator about the Document. 651

652 3.2.8 document-name (name(MAX))

653 The Printer MUST support this Operation attribute in Print-Job. Print-URI. Send-Document, and Send-URI operations 654 (see [rfc2911 section 3.2.1.1) and MAY support it in the Create-Job operation. For the Print-Job, Print-URI, and

655 Create-Job operations, the Printer MUST copy the value to the corresponding Job Description attribute¹¹.

3.2.9 document-natural-language (naturalLanguage) 656

This OPTIONAL Operation attribute specifies the primary natural language of the Document content (see [rfc2911] 657 658 section 3.2.1.1 and section 4.1.8).

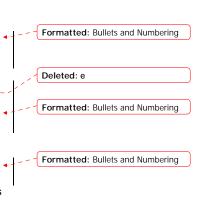

659 If the client supplies this "document-natural-language" Operation attribute with a value that the Printer doesn't support, the Printer MUST perform one of the following actions: (1) reject the request OR (2) accept the request and 660 661 either (a) put the Job in the 'pending-held' state or (b) process the job ignoring the attribute. See section 3 above for more details. 662

663 The values MAY include region as well as the language according to [rfc2911 section 4.1.8. If the document 664 contains more than one language, the value is the first or primary language of the document. The Printer MAY use 665 this value to select fonts or other Globalization processing. As indicated in [rfc2911] section 4.1.8, example include:

666 'en': for English 667 'en-us': for US English

> ¹¹ For the Send-Document and the Send-URI Operation attribute, the Printer copies them to the corresponding Document Description attribute defined in [ippdoc].

Page 21 of 46

Deleted: 6

Deleted: 02

Deleted: <#>output-device

(name(127))¶ This OPTIONAL Op ation attribu specifies the name of the target output device for a Printer that far out to multiple devices (see [rfc2911] section 2.1). This allows the client to control which output device the Printer selects. If this attribute is omitted, the Printer selects which output device seems best for the job in an implementation dependent manner. The client can discover which output devices the Printer supports by querying the Printer's "output-device-supported" Printer attribute (see section 7.11). ¶ If the Printer supports this Operatio attribute, the Printer MUST support the "output-device-assigned" Job Description attribute with the same values (see [rfc2911] section 4.3.13). See section 4.1.6 for additional information on "output-device" and

related attributes.¶ ISSUE01: The Job Description attribute "output-device-assigned" is single-valued even though "outputdevice" can be supplied at the Job, Document and page Override (i.e. sheet) level. Proposed resolution: Leave the Job Description attribute single-valued. This will prevent any interoperability problems with existing implementations. It will also handle the majority of uses. Add a singlevalued Document Description attribute in [ippdoc] to handle document level. Implementations that allow the routing of individual sheets should be capable of implementing "actuals". Even if they don't the "overrides" Template attribute will contain the requested output devices.

Inserted: <#>output-device (name(127))¶

This OPTIONAL Operation attribute specifies the name of the target output device for a Printer that fan out to multiple devices (see [rfc2911 section 2.1). This allows the client to control which output device the Printer selects. If this attribute is omitted, the Printer selects whicheve output device seems best for the job in an implementation dependent manner. The client can discover which output devices the Printer supports by querying the Printer's "output-device-supported" Print [2]

Job Template attributes 4 671

Table 7 lists the new Job Template attributes defined in this specification. These Job Template attributes can be 672 supplied in the Job Creation operations: Print-Job, Print-URI, and Create-Job operations and the Validate-Job 673 674 operation.

Job Template attributes are OPTIONAL for a Printer to support and for a client to supply in a Job Creation request. If 675 a Printer supports a Job Template attribute, then the Printer MUST copy the supplied attribute to the Job object, so 676 that a client MAY query the attributes in subsequent Get-Job-Attributes/Get-Jobs operations (see [rfc2911] section 677 4.2). In addition, as in [rfc2911], for each "xxx" Job Template attribute supported, the Printer MUST support the 678 corresponding "xxx-default" and "xxx-supported" Printer attributes, if defined. 679

680

4.1 Job Template attributes defined for Job-wide effect in multi-document jobs 681

682 This section defines additional Job Template attributes that have Job-wide effect and so are intended for use in the creation of multi-document Jobs. These Job Template attributes have the "job-" prefix to indicate their Job wide 683 scope. When clients supply these job-wide Job Template attributes, they MUST supply these attributes in Job 684 Creation and Validate-Job operations only. Clients MUST NOT supply these Job Template attributes as Document 685

¹² The "job-finishings" and "job-finishings-col" Job Template attributes also include corresponding "job-finishingsready" (1setOf type 2 enum) and "job-finishings-col-ready" (1setOf collection) attributes.

Template attributes in the Send-Document and Send-URI operations ([ippdoc]) or in any other operations. Clients 686 687 MUST NOT supply these attributes as member attributes of the "overrides" Job Template attribute [ippOverride].

4.1.1 job-copies (integer(1:MAX)) 688

This OPTIONAL Job Template attribute specifies the number of job copies, i.e., with all of the Documents taken 689 together. Its interpretation is independent of the value of the "multiple-document-handling" Job Template attribute. 690

691 See the "copies" Job Template attribute defined in [rfc2911] section 4.2.5 that switches between job copies and 692 document copies depending on the value of the "multiple-document-handling" Job Template attribute ([rfc2911]

693 section 4.2.4). 694 For example assume a Job has two documents. The "copies" attribute has a value of '3' and "job-copies" has a 695 value of '2". With "multiple-document-handling" set to 'separate-documents-collated-copies' the resulting printout 696 would have two sets (i.e. job-copies=2). The first set would be 3 copies of Document 1 and then 3 copies of The second set would be identical to the first. If a similar Job was run with "multiple-documents-697 698 handling" set to 'single-document-new-sheet' it would also produce two set. In this case however each set would 699 contain Document 1, Document 2, Document 1, Document 2, Document 1, Document 2 (i.e copies=3). The "copies" 700 and "job-copies" become more interesting when Documents within the Job each have their own value of "copies". <u>Fhis can be accomplished via the Document object [ippdoc] or Overrides [PWG5100.4], [ippOverride].</u> 701

702 4.1.1.1 job-copies-default (integer(1:MAX))

703 This OPTIONAL Job Template Printer attribute specifies the default number of copies for the job as a whole. The 704 Printer MUST support this attribute if it supports the "job-copies" Job Template attribute.

705 4.1.1.2 job-copies-supported (rangeOfInteger(1:MAX))

- 706 This OPTIONAL Job Template Printer attribute specifies the supported range of the number of copies for the job as a
- whole. The Printer MUST support this attribute if it supports the "job-copies" Job Template attribute. 707

708 4.1.1.3 job-copies-actual (1setof Integer(1:MAX))

- 709 This OPTIONAL Job Description attribute specifies the number of copies that the Printer actually printed for the job
- as a whole. The Printer MAY support this attribute even if it does not support the "job-copies" Job Template attribute. 710

4.1.2 job-cover-back (collection) 711

This OPTIONAL Job Template attribute specifies the cover for the back of the job, i.e., with all of the Documents 712

713 taken together and is independent of the value of the "multiple-document-handling" Job Template attribute. The

- member attributes are the same as "cover-back" (see [pwg5100.3] section 3.1) and with the same conformance 714
- requirements. However, the "cover-back" Job Template attribute switches between a job back cover and a document 715 back cover depending on the value of the "multiple-document-handling" Job Template attribute ([rfc2911] section 716
- 4.2.4). The "job-cover-back" Job Template attribute is equivalent to "cover-back" with "multiple-document-handling" = 717
- 'single-document-new-sheet'. 718

719 4.1.2.1 job-cover-back-default (collection)

720 This OPTIONAL Job Template Printer attribute specifies the default the cover for the back of the job. The Printer 721 MUST support this attribute if it supports the "job-cover-back" Job Template attribute.

4.1.2.2 job-cover-back-supported (1setOf type2 keyword) 722

This OPTIONAL Job Template Printer attribute specified the supported member attributes of the "job-cover-back" 723

Job Template collection attributes. The Printer MUST support this attribute if it supports the "job-cover-back" Job 724 725 Template attribute.

Copyright © 2003 IEEE-ISTO. All rights reserved.

Deleted: The "job-copies" Job Template attribute is equivalent to "copies" with "multiple-documenthandling" = 'single-document-newsheet'. Issue to F tuff much better than I--would it be ossible to add a small example, or a w small examples, that illustrates ow "job-copies" and "copies" work specially if they were both used e same time? Just an idea.

 Formatted: Bullets and Numbering

726 4.1.2.3 job-cover-back-actual (1setOf collection)

- 727 This OPTIONAL Job Description attribute specifies the "job-cover-back" that the Printer actually used in producing 728 the job. The Printer MAY support this attribute even if it does not support the "job-cover-back" Job Template
- 729 attribute.

730 4.1.3 job-cover-front (collection)

This OPTIONAL Job Template attribute specifies the cover for the front of the job, i.e., with all of the Documents taken together and is independent of the value of the "multiple-document-handling" Job Template attribute. The member attributes are the same as the "cover-front" Job Template attribute (see [pwg5100.3] section 3.2) and with the same conformance requirements. However, the "cover-front" Job Template attribute switches between a job front cover and a document front cover depending on the value of the "multiple-document-handling" Job Template attribute ([rfc2911] section 4.2.4). The "job-cover-front" Job Template attribute is equivalent to "cover-front" with "multiple-document-handling" = 'single-document-new-sheet'.

738 4.1.3.1 job-cover-front-default (collection)

- 739 This OPTIONAL Job Template Printer attribute specifies the default the cover for the front of the job. The Printer
- 740 MUST support this attribute if it supports the "job-cover-front" Job Template attribute.

741 4.1.3.2 job-cover-front-supported (1setOf type2 keyword)

This OPTIONAL Job Template Printer attribute specified the supported member attributes of the "job-cover-front" Job
 Template attributes. The Printer MUST support this attribute if it supports the "job-cover-front" Job Template
 collection attribute.

745 4.1.3.3 job-cover-front-actual (1setOf collection)

This OPTIONAL Job Description attribute specifies the "job-cover-front" that the Printer actually used in producing
 the job. The Printer MAY support this attribute even if it does not support the "job-cover-front" Job Template
 attribute.

749 4.1.4 job-finishings (1setOf type2 enum)

This OPTIONAL Job Template attribute specifies the job finishings, i.e., with all of the Documents taken together. Its interpretation is independent of the value of the "multiple-document-handling" Job Template attribute. See the "finishings" Job Template attribute defined in [rfc2911] section 4.2.6 that switches between job finishings and document finishings depending on the value of the "multiple-document-handling" Job Template attribute ([rfc2911] section 4.2.4). The "job-finishings" Job Template attribute is equivalent to "finishings" with "multiple-documenthandling" = 'single-document-new-sheet'.

756 4.1.4.1 job-finishings-default (1setOf type2 enum)

This OPTIONAL Job Template Printer attribute specifies the default job finishings. The Printer MUST support this
 attribute if it supports the "job-finishings" Job Template attribute.

759 4.1.4.2 job-finishings-ready (1setOf type2 enum)

This OPTIONAL Job Template Printer attribute specifies the ready job finishings, that is, the job finishings that maybe
 used without operator intervention. The Printer MUST support this attribute if it supports the "job-finishings" Job
 Template attribute.

Page 25 of 46

Deleted: 6/02

Deleted: keyword

763 4.1.4.3 job-finishings-supported (1setOf type2 enum)

This OPTIONAL Job Template Printer attribute specified the supported job finishings values. The Printer MUST support this attribute if it supports the "job-finishings" Job Template attribute.

766 4.1.4.4 job-finishings-actual (1setOf type2 enum)

767 This OPTIONAL Job Description attribute specifies the "job-finishings" that the Printer actually used in producing the 768 job. The Printer MAY support this attribute even if it does not support the "job-finishings" Job Template attribute.

769 4.1.5 job-finishings-col (1setOf collection)

770 This OPTIONAL Job Template attribute specifies the job finishings collection, i.e., with all of the Documents taken

together. Its interpretation is independent of the value of the "multiple-document-handling" Job Template attribute.

See the "finishings-col" Job Template attribute defined in [pwg5100.3] section 3.2 that switches between job

finishings collection and document finishings collection depending on the value of the "multiple-document-handling"
 Job Template attribute ([rfc2911] section 4.2.4). The "job-finishings-col" Job Template attribute is equivalent to

775 "finishings-col" with "multiple-document-handling" = 'single-document-new-sheet'.

776 4.1.5.1 job-finishings-col-default (collection)

This OPTIONAL Job Template Printer attribute specifies the default job finishings collection. The Printer MUST
 support this attribute if it supports the "job-finishings-col" Job Template attribute.

779 4.1.5.2 job-finishings-col-ready (collection)

780 This OPTIONAL Job Template Printer attribute specifies the ready job finishings collection, that is, the job finishings 781 collection that maybe used without operator intervention. The Printer MUST support this attribute if it supports the 782 "job-finishings-col" Job Template attribute.

783 4.1.5.3 job-finishings-col-supported (1setOf type2 keyword)

This OPTIONAL Job Template Printer attribute specified the supported member attributes of the "job-finishings-col"
 Job Template collection attribute. The Printer MUST support this attribute if it supports the "job-finishings-col" Job
 Template attribute.

787 4.1.5.4 job-finishings-col-actual (1setOf collection)

788 This OPTIONAL Job Description attribute specifies the "job-finishings-col" attributes that the Printer actually used in 789 producing the job. The Printer MAY support this attribute even if it does not support the "job-finishings-col" Job

- 790 Template attribute.
- 791 4.2 Job Template attributes that may have Document Scope and Override Scope

792 This section defines additional Job Template attributes that are not restricted to job-wide scope and MAY be sup

- 793 in Document Creation operations and in the "override" attribute to override at the Sheet level (see section 8). When 794 supplied in a Document Creation operation, these Job Template attributes describes the Document explicitly. This
- 795 specification does not define corresponding Document Description attributes, since this specification does not inclu
- 796 or depend on a Document object¹³.

4.2.1 output-device (name(127))	4	Formatted: Bullets and Numbering
This OPTIONAL Job_Template attribute specifies the name of the target output device for a Printer that fans-out to		Deleted: Description
multiple devices (see [rfc2911] section 2.1). This allows the client to control which output device the Printer selects. If this Job Template attribute is omitted, the Printer selects whichever output device seems best for the job in an implementation dependent manner. ISSUE 01: The [rfc2911] Job Description attribute "output-device-assigned" is single-valued even though the "output		Deleted: indicates the name of the output device that the client has supplied in the "output-device" Operation attribute (see section
device" Job Template can be supplied at the Job, Document and page Override (i.e. Sheet) level. Proposed resolution: Leave the Job Description attribute single-valued. This will prevent any interoperability problems with existing implementations. It will also handle the majority of uses. Add a single-valued "output-device" Job Template attribute which MAY be supplied in a Document Creation operation to give it Document scope and in the "overrides"		1.1.1), if any, in the Job Creation operation. The Printer sets the Job's "output-device-assigned" Job Description attribute (see [rfc2911] section ZZZ) to the name of the actual device assigned.
attribute to give it Sheet scope Implementations that allow the routing of individual sheets should be capable of implementing "overrided" and "-actuals". Even if they don't support -actuals, the "overrides" Template attribute will contain the requested output devices.		Inserted: indicates the name of the output device that the client has supplied in the "output-device" Operation attribute (see section 1.1.1), if any, in the Job Creation
4.2.1.1 Why there is no output-device-default There is no "output-device-default" Printer attribute. A Printer MAY have a dynamic scheduling algorithm to assign jobs to output devices, in which case the "output-device-supported" Printer attribute would have multiple values. A client that did not supply an explicit "output-device" is asking the Printer to choose the most appropriate output	$ = \frac{1}{V} + \frac$	operation. The Printer sets the Job's "output-device-assigned" Job Description attribute (see [rfc2911] section ZZZ) to the name of the actual device assigned.
device(s) (i.e. physical printer(s)) to print the Job. If "output-device-default" was allowed there would be no way to request this since the default output device would be assigned when it was not supplied by the client. If the Printer does not have a dynamic scheduling algorithm to assign Jobs to output devices, the Printer would populate "output-		Deleted: Document Description attribute in [ippdoc] to handle document level
device-supported" with only one value.		Formatted: Bullets and Numbering
4.2.1.2 output-device-ready (1setOf name(127))	4	Formatted: Bullets and Numbering
This OPTIONAL Job Template Printer attribute specifies the output devices that are available for use without human operator intervention, i.e., are accepting jobs and are not in need of attention. The Printer MAY support this attribute if it supports the "output-device" Job Template attribute.		
4.2.1.3 output-device-supported (1setOf name(127))	4	Formatted: Bullets and Numbering

Page 26 of 46

client in the Job operation using corresponding Operation attributes as indicated in the "Set by" column. The Printer
 MUST NOT support modification of any of these Job Description attributes using the Set-Job-Attributes operation
 ([rfc3380]).

This section divides Job Descriptions into two subsections: Section 5.1 contains Job Description attributes that

860 describe the Job as a whole and Section 5.2 contains Job Description attributes that are defaults for the Document(s)

861 in the Job¹⁴. The following legend is used in the tables in both sections:

Legend:	
IPP Attribute Syntax	the attribute syntax (see [rfc2911] section 4.1).
Set by	 indicates whether the value is set by the client or Printer in the Job Creation operation: client - means that the Printer MUST populate this Job Description attribute by copying <i>from</i> the corresponding Operation attribute that the client MAY supply in the Job Creation operation. See Table 5 for the corresponding Operation attribute. Printer - means that the Printer sets the value based on the state of the Printer.
Printer conformance	indicates MUST or MAY for Printer conformance.
Reference	references either to a sub-section of this specification or to a section in another specification, where further information about this attributes can be found.

862

Copyright © 2003 IEEE-ISTO. All rights reserved.

Page 27 of 46

¹⁴ The [jobx] specification does not define any Document Description attributes. See the [jppdoc] specification.

5.1 Job Description attributes that describe the Job as a whole

- This section defines those Job Description attributes that describe the Job as a whole. See section 5.2 below for those Job Description attributes that are defaults for the Document or Documents in the Job.
- 866

Table 8 - Job Description attributes that describe the Job as a whole

Job Description attribute name	IPP Attribute Syntax	Set by	Printer conformance	Reference
errors-count	integer(0:MAX)	Printer	MAY	§5.1.1
ipp-attribute-fidelity	boolean	client	MAY	§5.1.2
job-mandatory-attributes	1setOf type2 keyword	client	MAY	§5.1.3
output-device-assigned	name(127)	Printer	MAY	[rfc2911] §4.3.7.2
warnings-count	integer(0:MAX)	Printer	MAY	§5.1.4

867

Most of the existing "job-state" and "job-state-reasons" Job Description attribute values apply equally well to
individual documents in a multi-document job (with removal of the 'job-' prefix for those that apply to both Job and
Document). Furthermore, the job states are completely service-type neutral, so they can apply to scanning, faxing,
and formatting processes as well. The job state reasons have a number of reasons that are print service specific, but

most can apply to other types of service as well. The reason for separating state from reasons is so that the states can be the fundamental states that most implementations have, while the state reasons can vary depending on the sophistication of the system. The states are the ones that clients are most likely to base actions upon, and the state reasons are more information, both for programs and people.

876 5.1.1 errors-count (integer(0:MAX))

877 This OPTIONAL Job Description attribute counts the number of errors encountered processing the job as a whole.

An error where some portion of the printed output is not present, such as a glyph encountered which isn't in the

879 Printer's font or an image in a page was in a format that the Printer didn't support, though the Printer did support the 880 overall document format.

881 5.1.2 ipp-attribute-fidelity (boolean)

This OPTIONAL Job Description attribute indicates the value of the corresponding "ipp-attribute-fidelity" Operation attribute ([rfc2911] section 3.2.1.1)¹⁵ that the client supplied in the Job Creation operation. This Job Description attribute has no effect on the processing of the job once the Job Creation operation has been accepted¹⁶. However, this attribute does provide an audit capability to the user and service desk for comparing unexpected printed results with what was submitted.

887 5.1.3 job-mandatory-attributes (1setOf type2 keyword)

This OPTIONAL Job Description attribute indicates which Job Template attributes that the client required that the Printer Support in order to accept the Job Creation request. The Printer populates this attribute with the value of the corresponding "job-mandatory-attributes" Operation attribute (see section 3.1.2) supplied by the client in the Job Creation operation. This Job Description attribute has no effect on the processing of the job once the Job Creation represented to the processing of the job once the Job Creation

892 operation has been accepted¹⁶. However, this Job Description attribute does provide an audit capability of the Job

Deleted: output-device-requestion [3]

Deleted: 6 Deleted: 02

Deleted: 15

¹⁵ The "ipp-attribute-fidelity" attribute is defined only as an Operation attribute in [rfc2911]. This specification is defining it as a Job Description attribute as well which the Printer MAY support.

¹⁶ The "ipp-attribute-fidelity" and "job-mandatory-attributes" Operation attributes do have effect after the Job Creation operation when the Document Object is supported [ippdoc].

object in the Job History (see [rfc2911] section 4.3.7.2) to the user and service desk for comparing unexpected
 printed results with what was submitted. See section 3.1.2 for additional details of the semantics of this "job mandatory-attributes" Operation attribute that are not repeated here.

896 **5.1.4 warnings-count (integer(0:MAX))**

This OPTIONAL Job Description attribute counts the number of warnings encountered processing the job as a whole. A warning is where no information is lost, but the appearance of the printed output MAY not be as expected.

5.2 Job Description attributes that are defaults for the Document(s) in the Job

This section defines those Job Description attributes that provide defaults for the Document Or Documents in the
 Job. See section 5.1 above for those Job Description attributes that describe the Job as a whole.

902 5.2.1 compression-supplied (type3 keyword)

This REQUIRED Job Description attribute specifies the *default* compression used to represent the document(s) in
 the Job. The Printer sets this Job Description attribute from the corresponding Operation attribute (see [rfc2911]
 §3.2.1.1) supplied by the client in the Job Creation operation.

906 5.2.2 document-charset-supplied (charset)

This OPTIONAL Job Description attribute specifies the *default* charset used to represent this document (see section
 3.2.2). The Printer sets this Job Description attribute from the corresponding Operation attribute supplied by the
 client in the Job Creation operation.

910 5.2.3 document-digital-signature-supplied (type2 keyword)

911 This OPTIONAL Job attribute specifies the *default* digital signature technology used in the Document content. The

912 Printer sets this Job Description attribute from the corresponding "document-digital-signature" Operation attribute

- (see section 3.2.3 for the semantics), if supplied by the client in the Job Creation operation. If a Printer supports the
 "document-digital-signature" Operation attribute, the Printer MUST support this "document-digital-signature" Job
- 915 Description attribute.

916 <u>5.2.4</u>,document-format-details-supplied (1setOf collection)

This OPTIONAL Job Description attribute specifies the *default* details of the document format(s) of the Document
Object content. The Printer sets this Job Description attribute from the corresponding "document-format-details"
Operation attribute (see section 3.2.5 for the semantics), if supplied by the client in the Job Creation operation. If a
Printer supports the "document-format-details" Operation attribute, the Printer MUST support this "document-format-details" Job Description attribute.

922 5.2.5 document-format-supplied (mimeMediaType)

923 This REQUIRED¹⁸ Job Description attribute specified the *default* document format of the Document Object content.
 924 The Printer sets this Job Description attribute from the corresponding "document-format" Operation attribute (see

Copyright © 2003 IEEE-ISTO. All rights reserved.

Deleted: <#>output-devicerequested (name(127))¶ This OPTIONAL Job Description attribute indicates the name of the output device that the client has supplied in the "output-devicerequested" Operation attribute (see section 3.1.3), if any, in the Job Creation operation. The Printer sets the Job's "output-device-assigned" Job Description attribute (see [rfc2911] section) to the name of the actual device assigned. ¶

Deleted: <#>document-format (mimeMediaType) ¶ This REQUIRED¹⁷ Job Description

This REQUIRED¹⁷ Job Description attribute specified the *default* document format of the Document Object content. The Printer sets this Job Description attribute from the corresponding "document-format" Operation attribute (see [rfc2911] section 3.2.1.1 and [this spec] section 3.2.3 for the semantics), if supplied by the client in the Job Creation operation. ¶

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

Page 29 of 46

¹⁸ [rfc2911] did not define a "document-format" Document Description attribute; it is a new attribute defined in this specification.

925 [rfc2911] section 3.2.1.1 and [this spec] section 3.2.4 for the semantics), if supplied by the client in the Job Creation
 926 operation.

927 5.2.6 document-format-version-supplied (text(127))

This OPTIONAL Job Description attribute specifies the *default* version of the document format of the Document
Object content. The Printer sets this Job Description attribute from the corresponding "document-format-version"
Operation attribute (see section 3.2.6 for the semantics), if supplied by the client in the Job Creation operation (see
section). If a Printer supports the "document-format-version" Operation attribute, the Printer MUST support this
"document-format-version" Job Description attribute.

933 5.2.7 document-message-supplied (text(MAX))

This OPTIONAL Job Description contains either (1) the *default* message from the user to the operator about the
Document(s) or (2) a message from the operator, system administrator, or "intelligent" process to indicate to the end
user the reasons for modification or other management action taken on the Document. The Printer populates this
Job Description attribute from the "document-message" (text(MAX) Operation attribute value (see section 3.2.7)
supplied by the client in the Job Creation operation.

In addition, the user and the operator can set the value of this Job Description attribute explicitly using the Set-Job Attributes operation (see [rfc3380]).

941 5.2.8 document-name-supplied (name_(MAX))

This REQUIRED Job Description attribute specifies the *default* name of the document (see [rfc2911] §3.2.1.1). The
 Printer sets this Job Description attribute from the corresponding Operation attribute (see section 3.2.8) supplied by
 the client in the Job Creation operation.

945 5.2.9 document-natural-language-supplied (naturalLanguage)

This OPTIONAL Job Description attribute specifies the *default* primary natural language of the Document content
 (see [rfc2911] section 3.2.1.1). The Printer sets this Job Description attribute from the corresponding Operation
 attribute (see section 3.2.9) supplied by the client in the Job Creation operation.

949 6 New values to existing attributes

950 This section defines new values for existing attributes.

951 6.1 New job-state-reasons(1setOf type2 keyword) Values

The REQUIRED "job-state-reasons" Job Description attributes ([rfc2911] section 4.3.8) provide additional information
 about the job's current state, i.e., information that augments the value of the job's "job-state" attribute.

These new values MAY be used with any job state for which the reason makes sense. When implemented, the Printer MUST return these values when the reason applies and MUST NOT return them when the reason no longer

Printer MUST return these values when the reason applies and MUST NOT return them when the reason no longer
applies whether the value of the Job's "job-state" attribute changed or not. When the Job does not have any reasons
for being in its current state, the value of the Job's "job-state-reasons" attribute MUST be 'none'.

Note: While values cannot be added to the "job-state" attributes without impacting deployed clients that take actions
 upon receiving "job-state" values, it is the intent that additional "job-state-reasons" values can be defined and

Page 30 of 46

Page 31 of 46 ____ Deleted: 6/02

- 960 registered without impacting such deployed clients. In other words, the "job-state-reasons" attribute are intended to 961 be extensible.
- Table 9 lists the new keyword values for the "job-state-reasons" attribute defined in this specification as indicated in 962
- the References column. In Table 9 the keywords are listed in alphabetic order, while in their descriptions following 963

964 Table 9, they are listed in the most likely order of occurrence to help understanding.

965

Table 9 - New "job-state-reasons" attribute values

IPP Job Description attribute name	IPP Attribute Syntax plus Values	Printer conformance	Reference
job-state-reasons	1setOf type2 keyword	MUST	[rfc2911] §4.3.8
	digital-signature-did-not-verify	MAY	[this spec] §6.1
	digital-signature-type-not- supported	MAY	[this spec] §6.1
	errors-detected	MAY	[this spec] §6.1
	job-digital-signature-wait	MAY	[this spec] §6.1
	warnings-detected	MAY	[this spec] §6.1

966

967 For ease of understanding, the following value descriptions are presented in the order in which the reasons are likely 968 to occur (if implemented):

- 969 'digital-signature-type-not-supported: One or more documents in the Job contain a digital signature type 970 that is not supported. Implementation or site policy determines the state of the Job once this 971 condition is detected.
- 972 'job-digital-signature-wait': The Job is currently being held because the Job was submitted with a 973 "document-digital-signature" attribute value that is not supported.
- 974 'digital-signature-did-not-verify': One or more documents in the Job contains a digital signature type that is 975 supported (see section 3.2.3), but the signature did not verify when the Printer attempted to verify the 976 signature.

977 'errors-detected' : If the Printer supports this value, the Printer MUST add this value to "job-state-reasons" when the Printer generates the first error message. That is, a single occurrence of this value is 978 979 present in the "job-state-reasons" Job Description attribute if the Printer has generated one or more errors. An error indicates loss of information, such as a page not imaged. See also the 'warnings-980 981 detected' value.

982 'warnings-detected': If the Printer supports this value, the Printer MUST add this value to "job-state-983 reasons" when the Printer generates the first warning message. That is, a single occurrence of this value is present in the "job-state-reasons" Job Description attribute if the Printer has generated one 984 985 or more warnings. A warning indicates something did not go as expected, but there was no loss of information. For example, a font substitution. See also the 'errors-detected' value. 986

987 6.2 New media (type 3 keyword | name(MAX)) Values

988 This section specifies one new value for the "media" Job Template attribute:

989 'choice_iso_a4_210x297mm_na_letter_8.5x11in': The client has explicitly allowed a choice of media for the Job. The Printer MUST choose physical media of size na letter 8.5x11in (215.9 x 279.4 mm) or 990 iso_a4_210x297mm. The Printer MUST NOT choose physical media of any other size. The Printer 991 MAY scale the image to fit, but any scaling MUST be isomorphic scaling and without image content 992 993 loss, or overflow to additional sheets (so-called tiling), or truncate (and MUST notify the sending user

Copyright © 2003 IEEE-ISTO. All rights reserved.

Page 31 of 46

- 994and receiving user by implementation means if truncation is performed, since that is loss of995information).
- 996 Rationale: If printing by reference, the size of the document isn't known by the submitter.

See Annex A (section 18) for additional requirements for a revision of the PWG IEEE/ISTO 5101.1 Candidate
Standard [pwg5101.1] to include the new 'choice_iso_a4_210x297mm_na_letter_8.5x11in' and other choice
values.

1000 7 New Printer Description attributes

1001 This section lists *the new* Printer Description attributes defined in this document. These Printer attributes are "xxx-1002 supported" and "xxx-default" Printer attributes which indicate the default and supported values that the Printer 1003 supports. The Printer MUST support these Printers attributes if the Printer supports the corresponding "xxx" 1004 Operation attributes (see section 3) that the client can supply in a Job Creation or Document Creation request. 1005

1006 The column labels are:

Column Heading	
"Attribute Syntax"	the attribute syntax (see [rfc2911] section 4.1). Many "xxx-default" and "xxx- supported" attributes have the 'collection' syntax which consists of a number of member attributes. These member attributes are not listed in this table when they are the same as the corresponding "xxx" attribute in Table 7. Only those few Printer attribute collection attributes that do not have a corresponding Job Template attributes show the member attributes in this table.
"Reference"	the section which defines the semantics of the attribute.

1007 1008

Table 10 - New Printer Description attributes

Printer Description attribute name	Attribute Syntax	Reference
document-charset-default	charset	[this-spec] §7.1
document-charset-supported	1setOf charset	[this-spec] §7.2
document-digital-signature-default	type2 keyword	[this-spec] §7.3
document-digital-signature-supported	1setOf type2 keyword	[this-spec] §7.4

document-format-details-supported	1setOf type2 keyword	[this-spec] §7.6
document-format-version-default	text(127)	[this-spec] §7.7
document-format-version-supported	1setOf text(127)	[this-spec] §7.8
document-natural-language-default	naturalLanguage	[this-spec] §7.9
document-natural-language-supported	1setOf naturalLanguage	[this-spec] §7.10

1009

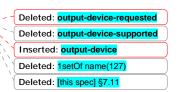

1010 7.1 document-charset-default (charset)

1011 This OPTIONAL Printer Description attribute indicates the default charset that the Printer will assume for charset-

ambiguous document formats when the client omits the "document-charset" Operation attribute (section 3.2.2). The

1013 Printer MUST support this attribute if it supports the corresponding "document-charset" Operation attribute (see

1014 section 3.2.2)

1015 7.2 document-charset-supported (1setOf charset)

- 1016 This OPTIONAL Printer Description attribute indicates the charsets that the Printer supports in Document Content,
- 1017 that is, supports as values of the "document-charset" Operation attribute (section 3.2.2). The Printer MUST support 1018 this attribute if it supports the corresponding "document-charset" Operation attribute (see section 3.2.2).
- this attribute in supports the corresponding document-charset. Operation attribute (see section 3.2.2

1019 7.3 document-digital-signature-default (type2 keyword)

1020 This OPTIONAL Printer Description attribute indicates the default digital signature, if any, that the Printer will assume 1021 when the client omits the "document-digital-signature" Operation attribute (section 3.2.3). The Printer MUST support 1022 this attribute if it supports the "document-digital-signature" Operation attribute.

1023 7.4 document-digital-signature-supported (1setOf type2 keyword)

1024 This OPTIONAL Printer Description attribute indicates the digital signature technologies that the Printer supports in 1025 Document Contents, that is, supports as values of the "document-digital-signature" Operation attribute (section 1026 3.2.3). The Printer MUST support this attribute if it supports the "document-digital-signature" Operation attribute.

1027 **7.5 document-format-details-default (collection)**

- 1028 This OPTIONAL Printer Description attribute indicates the default document format details that the Printer will 1029 assume when the client omits the "document-format-details" Operation attribute (section §3.2.5). The member 1030 attributes are the same as "document format details" (see section 3.2.5). The Printer MUST support this attribute if it
- 1030 attributes are the same as "document-format-details" (see section 3.2.5). The Printer MUST support this attribute, if it 1031 supports the "document-format-details" Operation attribute (see section 3.2.5).

1032 7.6 document-format-details-supported (1setOf type2 keyword)

This OPTIONAL Printer Description attribute lists the type2 keyword names of the member attributes of "document-format-details" that the Printer supports. The Printer MUST support this "document-format-details" (1setOf type2 keyword) Printer Description attribute, if the Printer supports the "document-format-details" (1setOf collection)
Operation attribute (see section 3.2.5). Table 11 lists the type2 keywords defined for use in the "document-format-details" details-supported" Printer attribute.

Table 11 - Keyword values of "document-format-details-supported Printer attribute

Type2 keyword values	Printer conformance
document-source-application-name	MAY
document-source-application-version	MAY
document-source-os-name	MAY
document-source-os-version	MAY
document-format	MUST
document-format-device-id	MAY

1040 7.7 document-format-version-default (text(127))

- 1041 This OPTIONAL Printer Description attribute indicates the default document format version that the Printer will
- assume when the client omits the "document-format-version" Operation attribute (section 3.2.6). The Printer MUST
 support this attribute if it supports the "document-format-version" Operation attribute.

1044 7.8 document-format-version-supported (1setOf text(127))

This OPTIONAL Printer Description attribute indicates the document format versions that the Printer supports for
 Document Contents, that is, supports as values of the "document-format-version" Operation attribute (section 3.2.6).
 The Printer MUST support this attribute if it supports the "document-format-version" Operation attribute.

1048 **7.9 document-natural-language-default (naturalLanguage)**

1049This OPTIONAL Printer Description attribute indicates the default document natural language that the Printer will1050assume for Document Content when the client omits the "document-natural-language" Operation attribute ([rfc2911]1051section 3.2.1.1). The Printer MUST support this attribute if it supports the "document-natural-language" Operation1052attribute.

1053 7.10 document-natural-language-supported (1setOf naturalLanguage)

1054 This OPTIONAL Printer Description attribute lists the natural languages supported in any of the supported document 1055 formats, that is, it is the union of the natural languages. The Printer MUST support this attribute if it supports the 1056 "document-natural-language" Operation attribute ([rfc2911] section 3.2.1.1).

1057 8 Override Scope of Attributes

1058 <u> Dverride Scope is only app</u> 1059 the Job Template attribute is applied as part of an Override [ippOverride]. An Override allows specifying Job 1060 Template attributes that apply to a portion of a Job. The portion of the Job that an Override can apply is referred to 1061 A Scope is the smallest entity to which a Job Template attribute applies. as its Scope. The order of Scopes is: a Job 1062 <u>contains one or more Documents that are printed on one or more Sheets that have up to two</u> 1063 one or more Pages. For a Printer to support a Job Template attribute in an Override, it MUST support the Job 1064 emplate at the specified Scope. Furthermore the scope of the attribute MUST be 'Sheet', Impression' or 'Page' 1065 Although operation attributes can not be used in an Override, their scope is of interest to determine their applicability "Send-Document" and "Send-Uri 1066 1067 1068

000	Document	Job Template Attributes that operate off whole Documents are not applicable as page
069		overrides. (The Document operations "Send-Document" and Send-Iri" as well as the
1070		Document Object [ippdoc] are used to apply overrides at this level.)
1071	Sheet	Job Template Attributes that operate on whole Sheets, such as "media" and "finishings".
1072		Attributes with this scope MAY be included in "overrides".
1073	Impression	Job Template Attributes that operate on whole Impressions, such as "number-up" or "x-
1074		side1-image-shift". Attributes with this scope MAY be included in "overrides".
1075	Page	Job Template Attributes that operate on whole Pages, such as "orientation-requested" or
1076		"print-quality". Attributes with this scope MAY be included in "overrides".
1077		

(name(127))¶ This OPTIONAL Printer Description attribute is the default for both the "output-device-requested" Job Description and the "output-deviceassigned" Job Description attribute. A Printer MAY support the "output-

Deleted:

assigned" Job Description attribute. A Printer MAY support the "outputdevice-default" Printer attribute if the Printer's scheduling algorithm has a default output device. On the other hand, a Printer MAY have a dynamic scheduling algorithm in which case this attribute is not supported.¶

Formatted: Bullets and Numbering

Deleted: <#>output-devicesupported (1setOf name(127))¶ This OPTIONAL Printer Description attributes lists the names of output devices that the Printer supports. The Printer MUST support this attribute if it supports the "

1206 12 IANA Considerations

1207 This section contains the registration information for IANA to add to the various IPP Registries according to the 1208 procedures defined in RFC 2911 [rfc2911] section 6 to cover the definitions in this document. The resulting

1209 registrations will be published in the <u>http://www.iana.org/assignments/ipp-registrations</u> registry.

1210 Note to the PWG Editor: Replace the References below to [this spec] with the IEEE-ISTO standard number 1211 for the appropriate document, so that it accurately reflects the content of the information for the IANA Registry.

1212 12.1 Attribute Registrations

1213The following table lists all the attributes defined in this specification. These are to be registered according to the1214procedures in RFC 2911 [rfc2911] section 6.2. If the attribute has a separate sub-section definition in this1215specification, that sub-section is listed as the Reference. This table contains the reference to another specification1216that completely defines each attribute.

1216	that completely defines each attribute.

13 Internationalization Considerations 1385

1386 The internationalization considerations for the extensions defined in this specification are the same as for handling the Job object in [rfc2911]. 1387

14 Security Considerations 1388

1389 This specification adds no more security burden on Printer implementations than does [rfc2911].

18 Annex A: Additional requirements for a revision of the PWG IEEE/ISTO 1415 5101.1 Candidate Standard [pwg5101.1] to add the new 'choice_xxx' 1416

This section also generalizes the choice mechanism for inclusion in a revision to the PWG IEEE/ISTO 5101.1 1417

1418 Candidate Standard [pwg5101.1]. This specification gives the outline of the proposed addition to [pwg5101.1] for information only, in order to agree to the one new value defined for use with IPPFAX, namely, 'choice_iso_a4_210x297mm_na_letter_8.5x11in'. 1419

1420

Page 44 of 46

¹⁴²¹ The proposed extension to [pwg5101.1] will have the following requirements:

1422 1423	1.	The ABNF will be extended to define the `choice_' prefix to introduce a list of choices of self describing names.
1424	2.	Following the `choice_' prefix will be two or more fully self describing names, including all three fields.
1425 1426	3.	The order of the list of fully self describing names MUST be in alphabetic order, so that there is only one canonical order for each list of choices.
1427 1428	4.	Printer MAY support dynamic combinations of supported values or MAY support the entire choice value as a conventional keyword which it simply matches for validation purposes.
1429 1430	5.	Printer MUST map the choice value to a particular supported value when selecting the actual media for marking.
1431 1432 1433 1434 1435	6.	If the Printer supports a 'choice_xxx' "media" attribute value and the "media-ready" Printer attribute, the Printer MUST include the 'choice_xxx' value in its "media-ready" Printer attribute as well as the currently loaded value(s) when at least one of the members of a choice value is ready. For example, if 'iso_a4_210x297mm' is loaded, then the "media-ready" Printer attribute MUST include the 'iso_a4_210x297mm' and the 'choice_iso_a4_210x297mm_na_letter_8.5x11in' values.

19 Annex B: Change Log (informative - to be removed before publication) 1436

The following summaries of the changes in chronological order: 1437

- Version 0.1, 18 May 2003: 1438
- 1439 1. Split document out of Document Object specification.
- 1440 2. Moved "document-format-target" and "document-format-version-target" from the Job Template section to the 1441 Operation Attributes section so that it can be supplied with Document Creation operations and so that it 1442 MUST be honored, even if "job-attribute-fidelity" is 'false' or omitted. 1443
 - 3. Removed all Document Description attributes and the concept of Job Level and Document Level. That terminology is introduced in the Document Object spec [ippdoc]. Now [ippdoc] is only an Informative Reference, not a Normative Reference.
- 1447 Version 0.2, 19 May 2003:

1444 1445

1446

1456

1457 1458

1459

1460

- 1448 1. Did not include the document-format-target and document-format-version-target attributes. PSI has their own definitions and we can avoid the discussion as to whether they should be Document Template attributes or 1449 1450 Operation attributes on Document Creation operations and whether there should be a "document-format-1451 target-default" and a "document-format-version-target-default". 1452
- Version 0.3, 28 May 2003: 1453
- 1454 Agreements reaches at the May 28, 2003 telecon: 1455
 - 1. Moved the Close-Job operation to the futures specification.
 - 2. Added the "pages-per-subset" Job Template from [pwg5100.4]. See Appendix B section Error! Reference source not found. for the minor differences.
 - 3. Added the terms: "Best Effort, Finished Document, Page, Page Subset, and Sheet.
 - 4. Clarified the conformance relationships between "xxx" Operation attributes and their corresponding "xxxdefault" and "xxx-supported" Printer attributes.
- 1461 5. Added rationale for each missing "xxx-default" and "xxx-supported" attribute.
- 1462 6. Added 'errors-detected' and 'warnings-detected' "job-state-reasons" values. 7. Added the new 'choice_iso_a4_210x297mm_na_letter_8.5x11in' "media" attribute value which is a choice 1463 1464 of two approximately equal media.
- 1465 8. Added the requirements for choice media keyword values for inclusion in a revision of the PWG IEEE-ISTO 1466 5101.1.

				Deleted: 02
1467	9. (Changed the "document-format-implemented" member attribute from 1setOf mimeMediaType to		
1468	0.	mimeMediaType since it is the key attribute value.		
1469	10.	Added another "document-format-implemented" example.		
1470		Updated the IANA section to agree with the additions.		
1471				
1472	Version	0.4, June 4, 2003:		
1473		Moved "document-format-details-implemented" Printer Description attribute to Futures.		
1474		Moved "pages-per-subset" (1setOf integer(1:MAX)) Job Template attribute to Futures.		
1475		Removed all CONDITIONALLY REQUIRED and CMUST statements and made them OPTIONAL and MAY.		
1476	0.	Added a statement of the intent for these attributes, so avoid the conformance statement problems for this		
1477		specification which is just a list of OPTIONAL attributes.		
1478	4	Removed the new terms "Honor" and "Best Effort", since they are synonym for "Support" and the opposite. I	t	
1479		is confusing to have synonyms.	•	
1480	5.	Added all of the new Operation/Job Description attributes that describe Documents to be supplied in Job		
1481	0.	Creation operations and copied to the corresponding Job Description attributes as default values for the		
1482		Document(s) of the Job.		
1483	6.	Added "output-device-default" and "output-device-supported" Printer attribute to provide the default for both		
1484	0.	the "output-device" Operation attribute and the "output-device-assigned" Job Description attribute.		Deleted: output-device-requested
1485	7.	Added "document-message" and "document-name" as Operation/Job Description default Document		Deleted. Sulpar device requested
1486		attributes for the Job.		
1487	8.	Clarified that the 'none' value of the "document-digital-signature" must be implemented, but the administrator		
1488	0.	MAY remove the 'none' value in order to require signatures to be used.		
1489	9.	Sated that all supplied member attributes of the "document-format-details" Operation attribute MUST have a		
1490	•••	value, i.e., MUST be empty.		
1491	10.	Normalized all of the Application Names and versions and Operating System Name values from the IANA		
1492		Registry to lower case, as is done with most other IPP attributes, in order to facilitate matching.		
1493	Moved	he requirements for the new 'choice xxx' values to be added to PWG 5101.1.		
1494				
1495	Version	0.6, July 26, 2003:		
1496	1.	Changed "output-device-requested" to "output-device"		
1497	2.	Made "output-device" a Job Template attribute, instead of an Operation attribute for the following two		
1498		reasons: (1) so that it can be used at the Sheet level in "overrides" to print a Sheet containing color pages on		
1499		a color printer while the other Sheets are printed on a black and white printer and (2) so that the "output-		
1500		device-actual" can be used to indicate the actual device(s) used, since [rfc2911] "output-device-assigned" is		
1501		only single valued.		
1502	3.	Updated introduction		
1503	4.	Added xxx-supplied to Job Description & updated table 5		
1504	5.	"output-device-default" explicitly prohibited & split out into its own section		
1505	6.	Added "output-device" multivalue issue/resolution.		
1506	7.	Added overrides summary and scoping of new attributes		
1507	8.	Added "-actual"s		
1508	9.	Added "output-device-ready" Job Template Printer attribute.	<pre></pre>	Formatted: Bullets and Numbering
1509	10.	Added Section 8 "Override Scope of Attributes"		
1510	11.	Added "print-content-optimized		Formatted: Bullets and Numbering
1511	.			Deleted: ¶
				Version 0.5, June 9, 2003:¶
				added xxx-supported as Job
				Description attributes for specific
				operational attributes that apply to documents within the Job

Page 13: [1] Inserted	Peter Zehler	7/24/2003 11:32 AM

output-device (name(127))

This OPTIONAL Operation attribute specifies the name of the target output device for a Printer that fans-out to multiple devices (see [rfc2911] section 2.1). This allows the client to control which output device the Printer selects. If this attribute is omitted, the Printer selects whichever output device seems best for the job in an implementation dependent manner. The client can discover which output devices the Printer supports by querying the Printer's "output-device-supported" Printer attribute (see section 7.11).

If the Printer supports this Operation attribute, the Printer MUST support the "outputdevice-assigned" Job Description attribute with the same values (see [rfc2911] section 4.3.13). See section 4.1.6 for additional information on "output-device" and related attributes.

ISSUE01: The Job Description attribute "output-device-assigned" is single-valued even though "output-device" can be supplied at the Job, Document and page Override (i.e. sheet) level. Proposed resolution: Leave the Job Description attribute single-valued. This will prevent any interoperability problems with existing implementations. It will also handle the majority of uses. Add a single-valued Document Description attribute in [ippdoc] to handle document level. Implementations that allow the routing of individual sheets should be capable of implementing "-actuals". Even if they don't the "overrides" Template attribute will contain the requested output devices.
