

1 **PWG MFD Working Group Teleconference Meeting Minutes**
2 **July 23, 2009**

3
4 **Attendees:**

5 Nancy Chen, Oki Data
6 Ira McDonald, High North, Inc.
7 Bill Wagner, TIC
8 Peter Zehler Xerox
9

10 **1. Identify Minute Taker** – Nancy Chen

11
12 **2. Approval of minutes from last face-to-face meeting:** [ftp://ftp.pwg.org/pub/pwg/mfd/minutes/pwg-ftp-](ftp://ftp.pwg.org/pub/pwg/mfd/minutes/pwg-ftp-mfd-minutes-20090624-25.pdf)
13 [mfd-minutes-20090624-25.pdf](ftp://ftp.pwg.org/pub/pwg/mfd/minutes/pwg-ftp-mfd-minutes-20090624-25.pdf)

14 No objection to the minutes.
15
16

17 **3. PWG process**

18 Attendees were informed that the meeting is held in accord with the PWG Intellectual Property
19 Policy. There was no objection.
20

21 **4. Agenda bashing**

22 No changes to the agenda were suggested.
23

24 **5. Overview of recent schema changes**

25 Pete showed the root of the updated schema, and he noted there is also a “pwgdeprecated.xsd” file
26 for us to track what are the changes from the existing IPP/PWG Semantics v1.

- 27 • Right now the root is the Server. The endpoints of communication are the individual Services
28 and the System. The question is whether the System should be the root?
 - 29 ○ Ira noted in DMTF model, System is the parent of everything which contains protocols,
30 logical devices, services,..., etc.
 - 31 ○ System provides overall operations for MFD and should be the root. SystemConfiguration is
32 the Subunits that represent the actual instances of the Subunits. Important to note is that
33 ConditionTable in SystemStatus represents general alerts/notifications; at Service level, the
34 ConditionTable only shows the conditions that affect that Service. Many elements are the
35 positive roll-up of Services. Agents and Managers should also be under the System.
 - 36 ○ The original Server as the root, came from the DPA model that has a Server that contains a
37 print service. Now the DPA Server should be renamed to System to be consistent with the
38 modern standard models such as DMTF CIM’s ComputerSystem.
 - 39 ○ Conclusion: Pete will move System to be the root.
- 40 • Pete reported that in the Schema he now has moved many common properties from
41 ServiceDescription and ServiceStatus of Print Service into the ImagingService base class. He
42 will continue to discuss and determine other necessary moves.
 - 43 ○ One suggestion is to have a System-specific Description and Status, but define the common
44 ServiceDescription and ServiceStatus for the Services. Another comment is that elements
45 that are not applicable should be distinguishable from that are optional in a Service.

- 46 o Pete will define SystemDescription, SystemStatus, SystemCapabilities, and define only
47 those common elements across all services in the base classes of ServiceDescription,
48 ServiceStatus, and ServiceCapabilities. The same change will be done for Subunits as the
49 next step.

50
51 **6. Discuss MFD Model and Overall Semantics - Interim Draft. (validate Bill's issues raised in**
52 **email below before update of draft)**
53

- 54 1) The "Print" service, following the IPP model, contained many more elements under
55 Description and Status than any other service. Many of these elements appeared applicable
56 to the MFD as a whole (and therefore would appear under System) and/or perhaps to each
57 individual service. Many of these elements have now been put into the ServiceDescription
58 and ServiceStatus general groups.

- 59
60 a) Do those elements which have been put in the general groups reasonably apply to all
61 services as well as to the system and, if so, what is the relationship between System
62 values and Service values? (i.e., is the System value the default or the overriding
63 value..or does it apply only to system-specific instances)

64
65 This was discussed previously in the Schema change overview. Pete is in the process of
66 defining new SystemDescription/Status/Capabilities, and the base classes of
67 ServiceDescription/Status/Capabilities. Each Service has its service-specific values for
68 the elements, should not use the values in System as default.

- 69
70 b) Do any of the other Print Service specific elements also apply (with the appropriate
71 service name) to the system and/or the general services element group? (e.g.,
72 MultipleDocumentJobsSupported, MultipleOperationTimeout,
73 MultipleOperationTimeoutAction" /, PrinterDetailedStatusMessages,
74 PrinterMessageFromOperator, PrinterMoreInfo, PrinterMoreInfoManufacturer,
75 PrinterSettableElementsSupported", ReferenceUriSchemesSupported,
76 RepertoiresSupported, ResourcesSupported, UserDefinedValuesSupported, etc.)

77
78 Pete will walk through all elements in System and Services and propose a straw-man
79 model for System elements and Service elements, along with the rules for roll-up.

- 80
81 2) In response to a question about the "relationships" diagram within MFD (and indeed, the
82 Functional Overview of a Multifunction Device discussion),
83 Pete responded:

84
85 "When discussing Services within an MFD, that maps to Services under Server. When we
86 discuss Subunits within an MFD, that maps to SystemConfigurations within System. It looks
87 as though there is some inconsistency as to what element represents the MFD in the schema.
88 I am not sure how this should be resolved. I believe there are transport endpoints at which
89 network services are available. For the individual MFD Services (e.g. Print, Scan) the
90 schema element XxxService (e.g. Server.Services.PrintServices.PrintService) represents the
91 active object. For the MFD as a whole the Schema element Server.System represents the

92 active object. I have begun defining a Web Service for the MFD as a whole. It seems to me
93 that this inconsistency should be discussed this Thursday."

94
95 Consensus: We already agreed to change Server to System that contains Subunits and
96 Services... The diagram of object relationship within MFD will be updated accordingly. The
97 Overall document should clearly state it's a MFD System model, not a MFD Model.
98

- 99 3) The schema has included EM EmailIn and EmailOut as services for some time, but we never
100 included them in the Services interface diagram that Pete drew up some time ago. Ira has
101 explained that these are not restricted to communicating images and therefore not subject to
102 inclusion in the overall FaxIn and FaxOut services. However, it is not clear to me that these
103 are MFD services any more than HTTP, FTP and PSTN are MFD services. I would like some
104 consensus that these are MFD services and what makes them MFD services, and how to
105 include them in the Services Interface Diagram.

- 106 ○ The updated Schema still has EmailIn and EmailOut for the following reasons:
 - 107 ○ FaxIn and FaxOut have requirement for document format (= image, can not be
108 RIPPed). EmailIn and EmailOut do not have the same requirement.
 - 109 ○ EmailIn and EmailOut have been services for many vendors' existing
110 products (e.g. HP, Canon, Xerox, Sharp, Samsung, KM), offering digital
111 sending as an EmailOut service that takes a scanned image and distributes it to
112 the network via email. EmailIn takes a document emailed in and stores with
113 Dublin Core metadata/prints/fax/transform the file. HTTP, FTP,... only move
114 files, do not provide document metadata at all.

- 115
116 4) I have been restructuring the Overall document and am having difficulty following a
117 reasonable hierarchical structure while still keeping the detailed elements descriptions at least
118 close to each other. This is my current organization. I would appreciate some discussion.
119

120 1 Introduction

121
122 2 MFD Model

123
124 2.1 The MFD Semantic Model

125
126 2.2 The System

127
128 2.3 The MFD Services

129
130 2.4 Service Document Interfaces

131
132 2.5 Functional Overview of a Multifunction Device

133
134 3 MFD Model Concepts

135
136 3.1 Jobs, Documents, Tickets and Templates

137
138 3.2 Documents, Regions and Images

139		
140	3.3	Coordinate Systems
141		
142	3.4	Job and JobTicketLifecycle
143		
144	3.5	DataTypes
145		
146	4	Service Theory of Operation, Operations and States
147		
148	4.1	General Service Sequence of Operation
149		
150	4.2	Service, Job and Document States
151		
152	4.3	Service Operations
153		
154	5	Service Model Component Elements
155		
156	5.1	JobTable
157		
158	5.2	DefaultJobTicket
159		
160	5.3	ServiceConfiguration - Subunits
161		
162	5.4	ServiceCapabilities
163		
164	5.5	ServiceStatus
165		
166	6	Imaging Job Model
167		
168	6.1	JobReceipt
169		
170	6.2	JobStatus
171		
172	6.3	JobTicket
173		
174	7	Document Model
175		
176	7.1	Document Receipt
177		
178	7.2	Document Status
179		
180	7.3	DocumentTicket
181		
182	8	The System Model
183		
184	8.1	The System Model Elements

185
186 8.2 System Operations
187
188 Ira would like the System model defined before Services in the outline. We ran out of time to
189 discuss this item further.
190

191 **7. Next Steps**

- 192 ○ Pete to update the Schema, and coordinate with Bill for Overall spec changes.
- 193 ○ Bill felt he has to start all over for the Overall spec. He expressed his desire to have other
194 people to step up for the editors of the Overall document.
- 195 ○ Next teleconference is in two weeks on August 6, Thursday, 3pm EDT.
